

Eliminate the Hidden Costs of Operating and Maintaining Your Networks

Are you experiencing persisting network performance issues? Mitigating subpar network performance does not have to entail deploying more cell sites or installing network upgrades that do not work. KGPCo's Lifecycle, Engineering, Architecture and Deployment (LEAD) consulting services group specializes in improving network operability through our Proactive Network Performance Improvement Services. We provide an all-inclusive evaluation of your network's current performance, and a plan of action to optimize it. Our expertise helps clients:

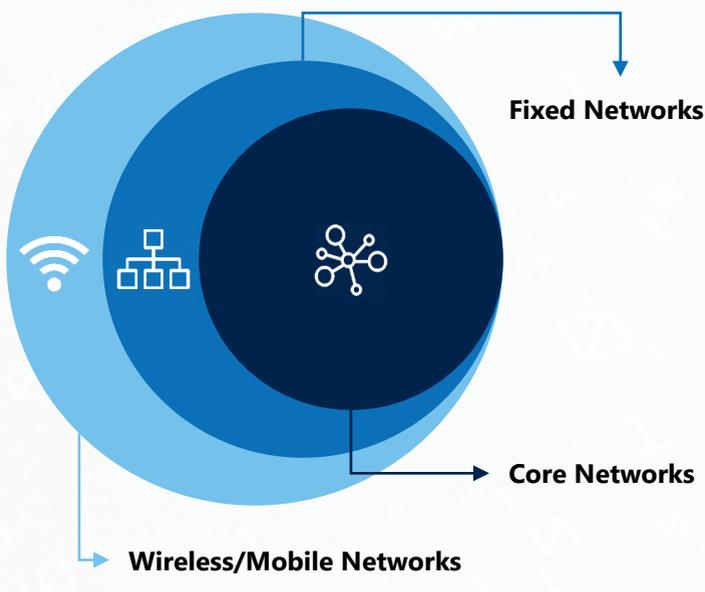

| | | | | |
|---|---|---|---|---|
|  Conduct Network Audits, Planning and Design |  Know exactly how your network is performing compared to your competitors in the areas you serve |  Ensure your sites are functioning as they were designed and intended to work |  Ensure parameters are compliant with the set parameter baseline standards |  Address inactive features, traffic and load balancing, and perceived user experience |
|  Troubleshoot hardware issues that may not be identified through normal KPI monitoring |  Assess current spectral utilization and provide forecast for efficient future deployments and saturation points |  Achieve greater interoperability between macro and small cell networks |  Assist in vendor equipment swaps to ensure optimum network performance during the process |  Efficiently manage and operate your networks |

KGPCo's OEM-agnostic approach allows us to work with and consult on almost every network infrastructure and variation. Our internal RF Optimization tools allow our clients to gain almost real-time visibility to quickly correlate performance issues to Configuration, Parameter and Fault Alarms.

Lifecycle, Engineering, Architecture and Deployment (LEAD) is the complete end-to-end function that encompasses KGPCo's Services and Cloud Solutions capabilities. Whether it is an existing, operationally mature network, or a new conceptual greenfield network, KGPCo's LEAD consulting services group specializes in improving your network operability. From business case analysis to network planning, spectrum allocation, network deployment and ongoing optimization and operational support, we guide our clients through developing and deploying a roadmap to operational excellence.

WE DELIVER THROUGH THE CENTRAL ENGINEERING OFFICE (CEO)

Advantages of the CEO

- Dedicated engineering staff and technical resources
- Access to unique tools and a vast array of partners
- Emphasis on knowledge sharing and training
- Freeing clients to focus on running their business
- Increased subscriber satisfaction
- Improved bottom line

About KGPCo:

KGPCo is the leading large-scale organization that combines a comprehensive suite of technical strategy and implementation services with a global logistics network and portfolio of technology partnerships for the communications industry. With nationally recognized capabilities in Advanced Supply Chain Management, Distribution, Cloud Solutions, and Inside Plant, Outside Plant and Wireless Services, the KGPCo OneTouch™ solutions allow operators to seamlessly deploy legacy and disaggregated technology. KGPCo is a trusted partner and integrator for customers, providing a single source that can deliver a complement of scalable network solutions.
